

## Talk on 'SAR & Health Issues'

### Report

Department of Electrical & Electronics Engineering in association with continuing education cell organized an invited talk on 'SAR & Health Issues' for the B. Tech student of EEE department on 27/10/2018. Prof. Sabarinath G. of ECE Dept. SJCT, Palai was the resource person. During this program he briefed about the effect of phones with high SAR (specific absorption rate) value, which potentially damage the body at a cellular level, particularly when we hold the phones against our ears and talk on them. The main concerns have focused on whether cell phones might increase the risk of brain tumors or other tumors in the head and neck area, as these areas are closest to where the phone is usually held while talking or listening on a call. It was a very informative session.
